OPERATION MANUAL

Highlight cursor

A bright circle around your mouse pointer, so everyone sees where you point.

Contents

01	Introduction	What the program does, Free and Pro
02	Installing and starting	Microsoft Store, first start
03	Settings	Size, opacity, outline, colours
04	Closing, Pro and support	Esc, upgrade, questions

This manual explains how to install and use **Highlight cursor 1.2**, step by step. The pictures show the real program. Tools marked **PRO** need the one-time Pro upgrade from the Microsoft Store. Training slides and how-to videos are in the Download Center at engineeringtoolsfb.com/downloads.

01 Introduction

Highlight cursor puts a bright, coloured circle around your mouse pointer. In meetings, on a projector or in a screen recording, everyone sees exactly where you point. The circle is **click-through**: you click, drag and type as usual.

The yellow highlight following the pointer over a presentation.

Perfect for

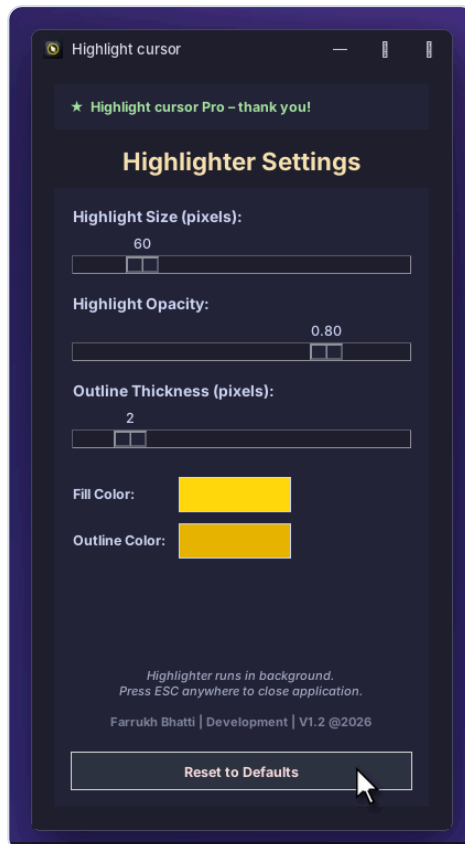

- Presentations and live demos on projectors and large screens
- Online meetings and screen sharing
- Screen recordings, video tutorials and courses
- Teaching, training and remote support

Free and Pro

Free	Pro (one-time purchase)
Bright yellow highlight	Any fill colour and outline colour
Size 20 to 100 pixels	Size up to 250 pixels
Click-through, Esc to exit	Adjustable opacity and outline thickness
No time limit, no ads	Buy once, restore on any PC

02 Installing and starting

- 1 Open the **Microsoft Store**, search for **Highlight cursor** and click **Get**.
- 2 Start **Highlight cursor** from the **Start menu**.
- 3 The circle appears around your pointer at once, and the **Highlighter Settings** window opens.

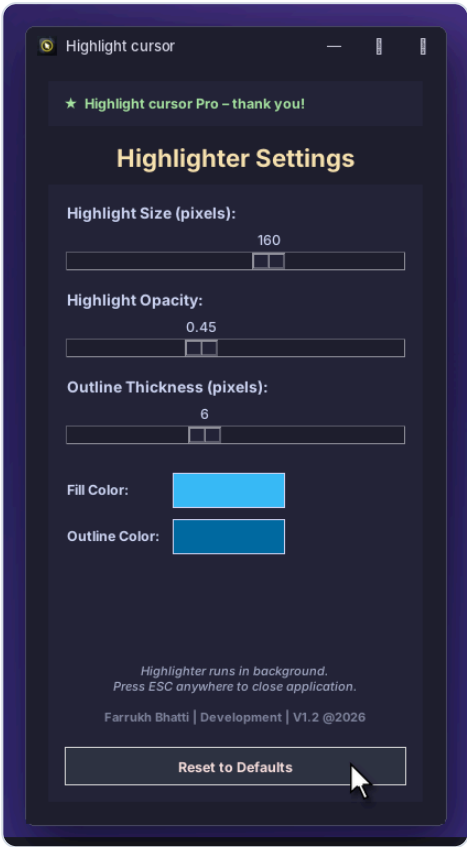

The settings window (default look).

The highlighter keeps running in the background while you work in other programs. Settings are saved automatically for next time.

03 Settings

Setting	What it does
Highlight Size (pixels)	The width of the circle. Free 20 to 100 px, Pro up to 250 px.
Highlight Opacity	How solid the circle is. Lower values let the text under it show through. (Pro)
Outline Thickness (pixels)	A ring around the circle, 0 to 15 px. (Pro)
Fill Color	Click the colour box and pick any colour. (Pro)
Outline Color	The colour of the ring. (Pro)
Reset to Defaults	Back to the yellow 60 px circle.

Every change shows the moment you move a slider.

A custom look: 160 px, opacity 0.45, blue fill and outline.

The custom highlight on screen.

TIP For screen recordings use a lower opacity (0.4 to 0.6) so the text under the pointer stays readable. For a projector use a bigger size and a strong outline.

04 Closing, Pro and support

Turning it off

- Press **Esc** anywhere in Windows.
- Or close the **Highlighter Settings** window.

Upgrading to Pro

- 1 In the settings window click **Upgrade to Pro**.
- 2 Buy once in the Microsoft Store window (no subscription).
- 3 All settings unlock at once. On another PC click **Restore purchase**.

Questions

Problem	What to do
The circle is not visible	Start Highlight cursor again from the Start menu. It closes when you press Esc.
Sliders or colours are greyed out	They are Pro settings. Upgrade, or Restore purchase on a new PC.
The circle covers text	Lower the opacity or the size.

Privacy and support

No account, no internet connection, no ads and no tracking. Manuals, training slides and videos: engineeringtoolsfb.com/downloads.
