Contents

01	Introduction	What the program does, Free and Pro
02	Installing and the screen	Microsoft Store, the main window
03	Loading files	Files, folders, drag and drop
04	Pools: the values to use	Author, Last Saved By, Program...
05	Date rules	Believable dates, always in order
06	Batch editing	Randomize, apply exact values, revert
07	Saving	Write the changes to the files
08	Troubleshooting and support	Common questions

This manual explains how to install and use **Word Properties Editor** 1.0, step by step. The pictures show the real program. Tools marked **PRO** need the one-time Pro upgrade from the Microsoft Store. Training slides and how-to videos are in the Download Center at engineeringtoolsfb.com/downloads.

01 Introduction

Word Properties Editor shows and changes the document properties of Office files in one table: **Author**, **Last Saved By**, **Program Name**, **Content Status**, **Content Type** and the dates **Created**, **Modified** and **Accessed**. It works on hundreds of files at once, instead of File > Info one document at a time.

Supported files

Program	File types
Word	.docx, .docm, .dotx, .dotm, .doc
Excel	.xlsx, .xlsm, .xltx, .xltm, .xls
PowerPoint	.pptx, .pptm, .potx, .potm, .ppsx, .ppsm, .ppt

What is changed

- The properties stored **inside** the file (Author, Last Saved By, dates, Program, Content Status and Type), as shown in Office under File > Info.
- Optionally the **Windows file dates** (Created, Modified, Accessed) shown in File Explorer.

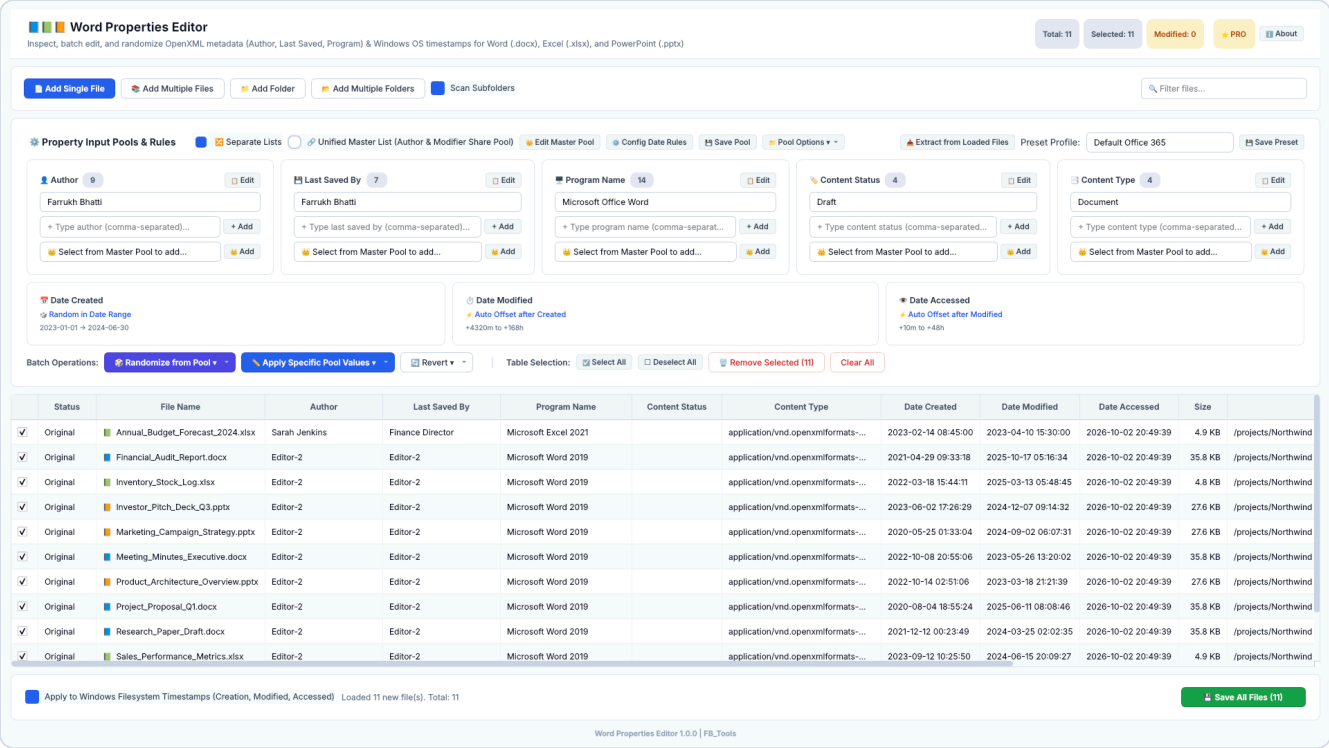

Free and Pro

Free	Pro (one-time purchase)
Add single files and multiple files	Add Folder and Add Multiple Folders (with subfolders)
See and edit every property in the table	Randomize from Pool for many files at once
Apply Specific Pool Values	Extract from Loaded Files to build the pools
Date rules and the date picker	Save, load, import and export preset profiles
Save up to 5 files at a time	Unlimited batch saving

Pro buttons show a ★ in the Free edition.

02 Installing and the screen

- 1
- Open the **Microsoft Store**, search for **Word Properties Editor** and click **Get**.
- 2
- Start it from the **Start menu**.

The main window with eleven files loaded.

Area	What it does
Top bar	Counters: Total, Selected and Modified files; the edition badge; About.
File buttons	Add Single File, Add Multiple Files, Add Folder, Add Multiple Folders, Scan Subfolders, and a filter box.
Property Input Pools & Rules	One card per property with its candidate values, plus the three date rules.
Batch Operations	Randomize from Pool, Apply Specific Pool Values, Revert, Select All / Deselect All, Remove Selected, Clear All.
Document table	One row per file with its status and every property.
Bottom bar	Apply to Windows Filesystem Timestamps and Save All Files.

03 Loading files

- **Add Single File** or **Add Multiple Files** opens a file dialog with Office file filters.
- **Add Folder** loads every Office file in a folder; tick **Scan Subfolders** to include subfolders. **Add Multiple Folders** loads several folders at once (Pro).
- Drag files or folders from File Explorer onto the window.

Each file appears as a row with the status **Original**. Click a column header to sort. Type in **Filter files...** to find files by name.

Selecting files

- The tick box at the start of each row marks the file for batch operations. **Select All** and **Deselect All** set all ticks.
- You can also highlight rows with **Ctrl**+click or **Shift**+click.
- **Remove Selected** takes files out of the list (nothing is deleted on disk). **Clear All** empties the list.

04 Pools: the values to use

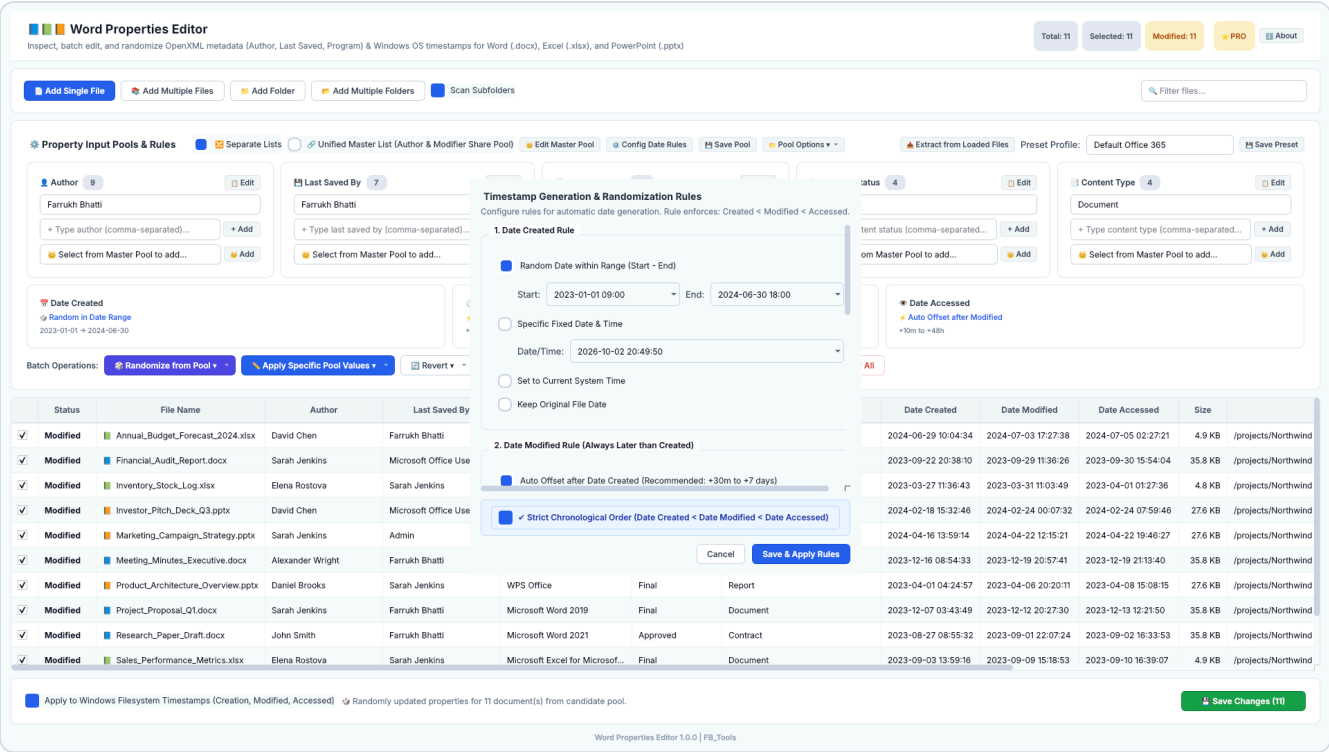

Each **pool** card holds the candidate values for one property. The box at the top shows the value used by **Apply Specific Pool Values**; the number next to the title is how many values the pool holds.

- 1 Click in **+ Type author (comma-separated)...** and type one or more names, separated by commas.
 - 2 Click **+ Add**.
 - 3 Use **Edit** on a card to see and change the whole list. **Select from Master Pool** adds values from the shared master list.
- **Separate Lists** keeps Author and Last Saved By apart. **Unified Master List** lets them share one pool.
 - **Extract from Loaded Files** (Pro) copies every author, editor and program found in the loaded files into the pools.
 - **Save Pool** keeps your pools for next time. **Preset Profile** and **Save Preset** store complete sets (Pro).

TIP The **Program Name** pool is format-aware: Randomize gives Word files a Word program name, Excel files an Excel one, and so on.

05 Date rules

Click **Config Date Rules**. The rules decide how new dates are made.

Timestamp Generation & Randomization Rules.

Date	Choices
Date Created	Random date within a range (start and end), a fixed date and time, the current time, or keep the original date.
Date Modified	Automatic offset after Created (minimum and maximum minutes; default 30 minutes to 7 days), a random date in a range, fixed, or current time.
Date Accessed	Automatic offset after Modified, the same as Modified, a range or a fixed date.

Keep **Strict Chronological Order** ticked: Created is always before Modified, and Modified before Accessed. Click **Save & Apply Rules**.

06 Batch editing

Randomize from Pool (Pro)

- 1 Click **Randomize from Pool** ▼.
- 2 Choose **Randomize Selected Files** or **Randomize All Files in Table**.
- 3 Every file gets a random author, last saved by, program, status and type from the pools, and dates that follow the date rules.

Apply to Windows Filesystem Timestamps (Creation, Modified, Accessed) Randomly updated properties for 11 document(s) from candidate pool. Save Changes (11)

Word Properties Editor 1.0.0 | FBTools

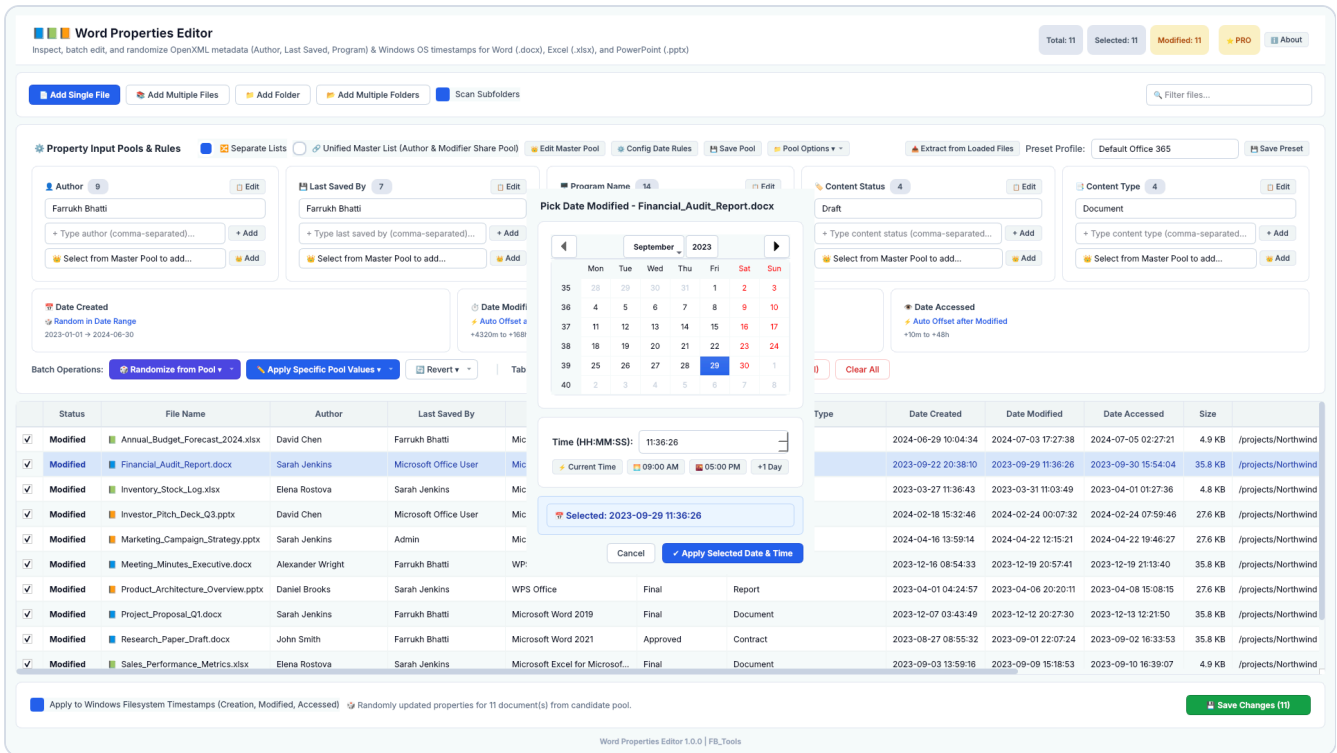

After Randomize: changed files show the status Modified.

Apply Specific Pool Values

- 1 Set the value you want in the box at the top of each pool card.
- 2 Tick the files (or **Deselect All** and highlight some rows).
- 3 Click **Apply Specific Pool Values** ▼ > **Apply Chosen to Selected Files** (or to **All Files**).

Edit one value by hand

- Double-click a cell to change it.
- Double-click a date to open the date and time picker. Choose the day and time, then **Apply Selected Date & Time**.

The date picker.

Revert

Revert ▼ brings back the original values of the selected or all files. Nothing is written to the files until you save.

07 Saving

- 1 Keep **Apply to Windows Filesystem Timestamps** ticked if File Explorer should show the new dates too.
- 2 Click **Save All Files** (it shows the number of files).
- 3 Confirm with **Yes**. The status changes to **Saved**.
